Supplementary graphs

This appendix was part of the submitted manuscript and has been peer reviewed. It is posted as supplied by the authors.

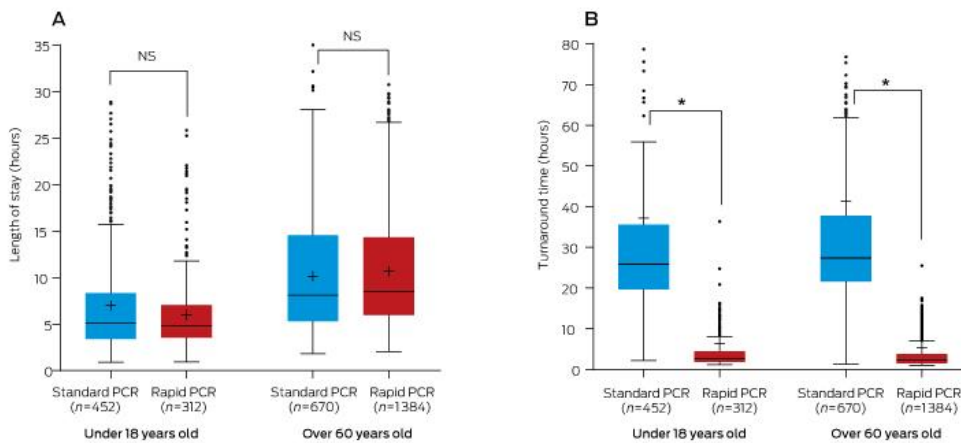

Appendix to: Wabe N, Li L, Lindeman R, et al. The impact of rapid molecular diagnostic testing for respiratory viruses on outcomes for emergency department patients. *Med J Aust* 2019; doi: 10.5694/mja2.50049.

Figure 1. Proportions of patients admitted to hospital (with 95% confidence intervals), by age group

After adjusting for baseline characteristics (Box 1): * $P = 0.004$; ** $P < 0.001$.

Figure 2. Emergency department lengths of stay (A), and test turnaround times (B) for patients, by age group

The box plots depict the median values and interquartile ranges (boxes), the 10th and 90th percentile values (whiskers), and outliers (dots). After adjusting for baseline characteristics (Box 1): NS = non-significant; * $P < 0.001$.
