

Supporting Information

1. Supplementary table

**This appendix was part of the submitted manuscript and has been peer reviewed.
It is posted as supplied by the authors.**

Appendix to: Joseph FA, Hyett JA, Schluter PJ, et al. New Australian birthweight centiles. *Med J Aust* 2020; doi: 10.5694/mja2.50676.

Table. Assessment of the statistical significance of the interaction between labour onset and gestational age

Quantile	Parameter	df	Estimate	Standard		t	Pr > t
				error	95% confidence limits		
0.10	ga*ONSETLAB	1	20.4683	0.2466	19.985 20.9515	83.02	<0.0001
0.50	ga*ONSETLAB	1	11.4286	0.2521	10.9344 11.9228	45.33	<0.0001
0.90	ga*ONSETLAB	1	0.2083	0.7602	-1.2816 1.6982	0.27	0.78

The statistical significance for interaction at the 10th and 50th centiles indicates that the relationship between birthweights and gestational age at these centiles differs significantly between spontaneous births and births by obstetric intervention.
