R. Dawson, M. Pinheiro, J. Oliveira, et al. The Telephysiotherapy for Older People (TOP-UP) program for improving mobility in people receiving aged care: a hybrid type 1 effectiveness–implementation randomised controlled trial. *Med J Aust* 2025; 223: 205-213. <https://onlinelibrary.wiley.com/doi/10.5694/mja2.70004>.

In Box 6, the first data row erroneously stated that the intervention had 192 participants instead of 92. The table should read as follows:

**BOX 6** | Six-month outcomes of the telephysiotherapy for older people (TOP-UP) trial, 1 September 2021 to 30 November 2023: falls.

Outcomes	Control	Intervention	Intervention v control: adjusted between-group difference (95% CI)
Participants	100	92	
Falls	96	58	IRR, 0.60 (0.35–1.01)
Participants with a least one fall	44 (44%)	29 (32%)	RR, 0.62 (0.42–0.92)
Fall-related fractures	4	2	IRR, 0.51 (0.09–2.55)

Abbreviations: CI, confidence interval; IRR, incidence rate ratio; RR, relative risk; SD, standard deviation.
