FOR a small group of highly skilled surgeons, a regular day at work involves plunging a knife into a patient’s chest, stopping the heart from beating, and replacing blocked arteries with new vessels from elsewhere in the body.

Cardiothoracic surgery focuses on high-risk, high-precision procedures that have the potential to transform lives for patients with heart and lung diseases. Cardiac surgeons typically perform 1–2 heart operations each day, whereas thoracic surgeons may do 2–3. Doctors considering the specialty therefore need to have a passion for surgery and be comfortable spending a lot of time in the operating room.

But it’s not just “cutting and sewing”, says Professor Julian Smith, a cardiothoracic surgeon who is professor of surgery at Monash University.

“There’s also a lot of medicine involved in the specialty. There is an emphasis on procedures, but there’s still a demand for surgeons who have a very good understanding of the underlying disease processes”, he says.

Professor Smith, who is also president of the Australasian Society of Cardiac and Thoracic Surgeons, says the specialty demands a lot of other competencies in addition to technical skills. During demanding, lengthy procedures, the cardiothoracic surgeon is usually the leader of a multidisciplinary team of about 8–9 people including surgeons, nursing staff, an anaesthetist and a perfusionist.

“There is a lot of interaction with multiple care providers, and the surgeon takes most of the responsibility for care of the patient, so they need to be a leader and a communicator. You also need to have a certain confidence in your abilities”, he says.

Doctors who choose to specialise in cardiothoracic surgery also need to be comfortable with the risks involved. “It’s an environment where patients could die as a result of the surgery. It’s rare but there’s always that possibility.”

For doctors who do pursue the specialty, Professor Smith recommends it as an incredibly rewarding career, which offers a variety of clinical and research opportunities. The specialty has a strong record in research, and research is a required part of the training

LML News

LML Medical Recruitment will be visiting South Australia in May!

Come and meet our Recruitment Consultants at the RACS Exhibition in Adelaide on the 2nd of May and learn all about our Australia wide opportunities.

We’re working for you.

For further details on these positions and other opportunities available to you please call us: 1300 889 133

Or visit our website: www.lml.com.au
Address: PO Box 3097 Willoughby North NSW 2068
Email: work@lastminutelocums.com.au Fax: 1300 360 133
program. Cardiothoracic surgeons are also well remunerated, with income typically ranging from about $300 000 to $500 000, depending on the volume of procedures and the amount of work in the public and private sectors.

Most cardiothoracic surgeons work in both public and private hospitals. Because of the reliance on intensive care and other medical services, cardiac surgery is usually only performed in capital cities or major regional centres. Thoracic surgery, which is not as reliant on intensive care, is more often available in smaller regional centres.

Professor Smith acknowledges that some aspects of the specialty may turn off potential recruits, particularly the 6-year training program. “It is a long training program in a demanding specialty. We need to ensure that registrars are well equipped to be independent surgeons doing pretty demanding and responsible surgery”, he says.

There is also a perception among young doctors that increased rates of stenting (a procedure performed by cardiologists) mean that there’s less work for surgeons. Professor Smith says that while the volume of coronary artery bypass graft surgery has diminished slightly, it “hasn’t fallen away to prohibitive levels”. Cardiac surgeons are in fact increasingly operating on people with stents, who have developed more advanced disease or problems with their stents since they were inserted.

Professor Smith says that, although work hours are long, it’s a misconception that the specialty involves substantial after-hours or emergency work. “If you’re working in a non-transplant, non-trauma setting, the amount of after-hours work is not too bad compared with other specialties”, he says.

One popular belief which is reflected in reality is that the specialty is very male-dominated. Professor Smith estimates that there are about 125 cardiothoracic surgeons in Australia, and only about 5%–10% of these are women. The job is not well suited to part-time work, so may not be the best specialty for people with primary child-raising responsibilities. “It is possible to do it part time and raise a family, but it’s not ideal because of the need to maintain skills and provide continuity of care”, he says.

**Training**

The Royal Australasian College of Surgeons (RACS) offers a 6-year training program in cardiothoracic surgery, with graduates awarded Fellowship of the RACS in cardiothoracic surgery. Postgraduate Year 2 is the earliest that doctors can apply to the program. Entry into the program is competitive, with 30–50 applicants typically vying for around 6–10 training positions. Upon completion of the program, the job market is also tight, and most graduates choose to do an overseas fellowship before accepting a local consulting job.

Professor Smith says there are several excellent fellowship programs in North America and Europe, specifically at Brigham and Women’s Hospital in Boston, Toronto General Hospital, and the Mayo School of Graduate Medical Education in Rochester, Minnesota.

More information about the RACS surgical training program can be found at [http://www.racs.edu.au](http://www.racs.edu.au).

*By Sophie McNamara*
Mr Michael Rowland reflects on his career in cardiothoracic surgery.

Mr Michael Rowland received his medical degree from the University of NSW in 1986. He trained in cardiothoracic surgery under the guidance of the late Victor Chang at St Vincent’s Hospital, Sydney, and also studied at Cambridge University’s Papworth Hospital in the UK. He currently holds a variety of public and private posts, including head of thoracic surgery at the Northern Hospital, Melbourne, and cardiothoracic surgeon at Melbourne Heart and Lung Surgery. He is chairman of the Board of Studies of Cardiothoracic Surgery at the Royal Australasian College of Surgeons.

“Like many young doctors my choice of specialty was influenced by a mentor-like figure. There were two surgeons who inspired me — one was Victor Chang, who I worked with at St Vincent’s Hospital in Sydney. The other is less well known, the quiet achiever of the group: Dr Alan Farsworth, who also works at St Vincent’s. He’s extraordinarily good at what he does and has inspired many people.

At university, I was always more interested in the cardiovascular and respiratory systems than other parts of the body. From a more pragmatic perspective, there are very few smelly bits in the chest. That may sound flippant, but when you’re working with it every day, it adds up. When I was working around the smelly bits as a younger surgeon, I didn’t enjoy it much.

The very first time I saw a beating heart I was a medical student doing an anaesthetic term. It was totally mesmerising to see this incredibly beautifully designed piece of muscle performing this intricate movement that is life giving, life sustaining — and doing it independently.

I also clearly recall the first time that I actually put a knife into a living patient as a surgical trainee. It’s a very intellectually, psychologically stimulating — and at the same time, scaring — moment.

The concept of plunging the knife in continues to remind me of the need to remain in touch with the human side of the specialty. If you get too robotic and arrogant and automated, you lose touch with the human who is your patient. To lose your humanity makes you a poorer surgeon. But at the same time, you can’t get too emotional during the process, because you’ve got a very challenging job to do. It’s a psychological battle that all surgeons go through. Some of them lose the battle and become arrogant and out of touch.

Cardiac surgery appeals to me because it’s high-stakes, challenging work. It’s also one of those specialties where we’re mostly building something new or replacing something, whereas most other treatments, particularly in surgery, involve a problem that needs to be cut out or removed. Cardiac surgery is a more constructive rather than a destructive specialty.

About 80% of the work is procedural, and when a cardiac surgeon operates, it’s usually a 3–6-hour prospect. The longest procedure I’ve done was almost 12 hours. That can be physically challenging, particularly as I get a bit older. It can also be psychologically challenging, because every time you operate, literally someone’s life is at risk.

One particularly rewarding case happened when I was a registrar doing transplant training. I was involved in the heart transplant operation for a man in his early twenties. Postoperatively he initially had many problems — at one stage his heart stopped beating. We were doing some pretty dramatic stuff in intensive care and it reached the point where I wasn’t sure we could bring him back. I was on the phone to the supervising surgeon, explaining that we were probably going to lose him when, like something you see in a movie, he suddenly came back. Even though it happened 18 years ago he still sends me a Christmas card each year saying how well he is. It was a team effort, but I don’t think you can put a dollar value on the sense of satisfaction something like that brings.

The specialty’s relevance is being challenged by newer procedures that don’t involve a surgeon, such as stents and other percutaneous techniques. Many younger surgeons are justified in worrying that their prospects of achieving a long, successful, happy career is being threatened.

When a young doctor comes to me and says he or she want to be a cardiothoracic surgeon, I do point out the harsh realities. But I also say, “if your heart says that’s all you want to do, then go for it”. It can be an extremely rewarding career.

Lately there’s been a re-evaluation of the role of surgery and the ways can we reduce the trauma involved. At the group practice where I work in Melbourne we’re introducing a minimally invasive technique for mitral valve surgery. We’re also about to start using a robot for some mitral valve surgery operations. This isn’t a world first, but in Australia the use of robots in surgery is currently limited.

My most significant area of interest is in administration and education. The college is being challenged to do a better job, so I saw an opportunity to contribute. I enjoy interacting with both established colleagues and young surgical trainees. It’s pro-bono work, so I see it as a way for me to give back to the community.”
Running a successful surgical practice

IN a surgical practice, marketing, communication and the quality of staff can make the difference between success and just getting by.

Nigel Flowers, the managing director of Flowers Financial Group, says marketing and establishing an online presence have become increasingly important to maintaining a successful surgical practice in the past 10 years.

Marketing directly to patients as well as to general practitioners and other stakeholders is a key part of building the business.

“Patients are now often telling their GPs which surgeon they want to be referred to”, says Mr Flowers, whose company deals mainly with medical practices, particularly surgical practices.

Patients want to know more about the person who will operate on them and they are driving the demand for informative, professional websites, Mr Flowers says.

“The key thing is that with all the training to become a surgeon they do not get trained to be business people”

But he warns surgeons not to try to do their own marketing, rather to outsource it to experts.

“The key thing is that with all the training to become a surgeon they do not get trained to be business people”, says Mr Flowers.

Successful surgical practices know the importance of good communication with patients, staff, GPs, hospitals, anaesthetists and other stakeholders.

Two surgical practices that have made communication a big part of their business are the Western Australian Plastic Surgery Centre (www.plasticsurgerycentre.com.au) in Perth and BrizBrain and Spine (www.brizbrain.com.au) a neurosurgery and spinal surgery practice in Brisbane.

Narelle Supanz, practice manager for the Western Australian Plastic Surgery Centre, says surgical practices have different dynamics to other types of practices.

Ms Supanz, who is also vice-president of the Australian Association of Practice Managers, says a surgical practice has to deal with a large number of stakeholders, including hospitals and anaesthetists, so good communication is vital.

At the centre, communication is facilitated through an informative website. Surgeons also provide medical education opportunities for GPs, nurses, hospitals, insurance companies, emergency departments and occupational health practitioners, particularly in the field of hand injuries, which is one of the practice’s specialities.

The centre has nine surgeons and 24 staff, dealing with five teaching hospitals and 12 day surgeries and private hospitals.

At BrizBrain the excellent reputation of the neurosurgeons, developed through a high level of patient care and successful outcomes, is used as a self-marketing model, says practice general manager Mark Higginbotham.

Both Ms Supanz and Mr Higginbotham emphasise that having the right staff and working environment for surgeons is essential to success. The two practice managers agree that it is important to let surgeons be surgeons by employing well trained and trustworthy staff to deal with all administrative matters.

Mr Flowers recommends finding people with experience in the health system if possible. “Staff who deal well with patients are a priority but knowing how the health system works is important”, he says.

Ms Supanz says the surgical model of practice means each surgeon has his or her own secretary, who must be trusted to not only manage patients and bookings, but also financial transactions.

“A surgeon usually develops a strong bond with their secretary and a good secretary can second guess what a surgeon wants”, Ms Supanz says. “If the relationship doesn’t work, then the practice will not flow well.”

Mr Higginbotham says excellent working conditions are used to attract the right staff. Conditions include 5 weeks’ annual leave, regular updates of the computer and phone systems, modern and well equipped offices, corporate uniforms, regular staff dinners and cultural events, and flexible working hours.

“The surgeons recognise how important staff are to the success of the practice”, he says.

BrizBrain has five neurosurgeons and 17 staff across three sites in Brisbane, close to the hospitals where the surgeons operate. The surgeons also regularly consult in regional areas of south-east Queensland and northern NSW.

Ms Supanz emphasises the importance of all surgeons in the practice having a shared philosophy. For example, the Western Australian Plastic Surgery Centre does not agree with payment plans for cosmetic surgery.

continued on page C6
“We don’t agree with that because it adds financial pressure for the patient”, she says.

Mr Higginbotham adds that having all the practice surgeons included in decision making about the growth of the practice is vital to success.

For example, at BrizBrain the surgeons do regular reviews of cases to ensure best practice and patient outcomes. The practice also offers opportunities for young neurosurgeons.

“Young, up-and-coming neurosurgeons have the chance to work with successful, experienced neurosurgeons, accelerating their professional development by being able to draw from the wealth of clinical and surgical experience”, Mr Higginbotham says.

**Online billing**

Although optimal patient care is the primary focus for all practices, financial and management issues can make or break a business.

Surgeons have been slow to take advantage of online billing systems, which can reduce costs and provide more secure financial records, Ms Supanz says.

In contrast to general practice, which has taken advantage of online billing, surgeons continue to maintain systems that could leave them vulnerable to fraud.

She says Medicare Australia’s ECLIPSE (electronic claim lodgment and information processing service environment) system (http://www.medicareaustralia.gov.au/provider/business/online/eclipse/index.jsp) provides online claiming for both Medicare and private health funds as well as a detailed account of all payments to individual surgeons.

Some surgeons were lax in seeing the necessity to cross-balance payments received via the practice management software with what had actually been banked in their bank account, Ms Supanz says.

Online billing and linking practice and finance software creates a much clearer record of all transactions for individual surgeons.

“Surgical practices are still well behind in regards to methods of payment. From the patient’s perspective, electronic claiming provides an easy and convenient option”.

ECLIPSE allows patients to make payments and health fund claims at the practice, rather than having to make Medicare and health fund claims separately.

**Practice finance**

Young surgeons just finishing training need to think about planning, building and protecting their business “from day one”, Mr Flowers says.

Unlike several other branches of medicine that have been corporatised, surgeons still operate mainly as individual business structures, and need to have a business plan in place early on.

A surgical practice should aim for expenses to equal 30% of turnover, which can be difficult when starting out.

He says the peak earning time for surgeons is usually between 35 and 50 years of age, when their skills are at their best. However, this is the same period when most people are raising a family and have a mortgage.

Mr Flowers says young surgeons should get good advice on the best ways to minimise their tax and invest in other areas to ensure they have financial security later in life, when they may no longer be able to operate and their income is not as high.

“Always plan for the worst”, he says. “Having the right structure in place that secures assets and provides for the future should be the aim.”

Full Time and Part Time Opportunities

Australia Wide

As the world’s leading healthcare, medical assistance and security services company, International SOS provide many opportunities to help you reach your full potential. Operating in over 70 countries, International SOS provides integrated medical, clinical, and security solutions to organisations with international operations. Services include planning and preventative programs, on-country expertise, and emergency response. A global team of 7,000 employees led by 900 full-time physicians and 200 security specialists provides health and security support to enable its members to operate wherever they work or travel. Members include 66 percent of the Fortune Global 500 companies.

We are pioneers in our field, operating in a fast-paced, dynamic and entrepreneurial environment.

Our onsite healthcare clinics, based throughout the country in remote areas as well as metropolitan locations, are seeking General Practitioners to provide high level clinical healthcare to all patients.

On offer is the opportunity to work with ongoing treatment and education programs, with some programs focusing to improve remote and indigenous health. Our remote area medical service provides a great opportunity to branch into a sphere of Community Health with new challenges and cases quite different to usual medical practices.

Enjoy a competitive salary. Be rewarded with paid travel expenses plus additional site based benefits for remote locations, the opportunity to develop your career, as well as open the door to international opportunities.

Please contact Amber Moloney (02) 9372 2940 or email amber.moloney@internationalsos.com

An opportunity is available to enjoy a clinical and academic career whilst providing clinical leadership for a high quality and comprehensive surgical service at Ballarat Health Services. BHS is the largest health service in the Grampians region and throughout regional Victoria, offering most surgical specialties. BHS performs 11,100 surgical procedures a year in 6 main operating theatres and a Day Procedure Centre supported by 8 accredited specialist surgical registrars.

The successful applicant will lead the surgical service, delivering direct high quality surgical care within their area of expertise. An in-hours sessional and operating list allocation would be available and participation in the relevant specialty surgical on-call roster is required. Surgical sub-specialty interests will be favourably considered.

BHS is experiencing exciting growth and continues to expand its regional teaching role. You would be joining a progressive health service that will encourage you to develop your interests, and will build a supportive network around you both regionally and with metropolitan referral centres.

With a population of over 90,000, the City of Ballarat has a thriving music and artistic community, first class education facilities and sporting interests catered for. Ballarat is less than 1.5 hours from Melbourne CBD and an international airport.

A primary medical qualification fully registrable with the Medical Board of Australia and FRACS or equivalent are required, as is wide academic and clinical experience.

A generous remuneration package is available, including rights of private practice, superannuation, continuing medical educational allowances, study leave and assistance with relocation expenses.

For further information please contact:
Mr Philip Reasbeck, Executive Director Medical Services on +61353204278 or pgr@bhs.org.au

Applications must address the key selection criteria, include at least three professional referees and be submitted via the BHS website.

Dunedin Revision Course for Candidates sitting the RACP Written Examination
University of Otago
Dunedin  New Zealand
14 – 25 November 2011

This revision course is for trainees who are intending to sit the FRACP Written Examination in 2012.
This is an intensive 2-week residential programme for individuals intending to sit the written component of the RACP examination, and comprises of 11 days of specialty-based revision with updates on “Leading Edge” topics and includes a half-day MCQ Mock Examination. Each day is fully structured with presentations given by senior specialty consultants. There are comprehensive handouts for each specialty.
Social events are scheduled. This includes a dinner and dance at Dunedin’s famous Larnach Castle.

Basic Physician Training on DVD  2011

The Department of Medicine based at Dunedin Hospital, Dunedin, New Zealand, produces a weekly DVD specifically aimed at basic physician trainees, but is also suitable for physicians wanting up to date continuing medical education. Each session runs for approximately 2 hours. All medical specialties are covered.
The sessions provide an update/review of the particular medical specialty followed by review of MCQs in that specialty.
For those interested in subscribing to this Lecture Series, DVDs will be issued regularly throughout the year. Excerpts of lectures can be viewed on our website.
