EDITORIALS

444 More students and less patients: the squeeze on medical teaching resources
Brendan J Crotty

445 Asthma in Australia 2005
Guy B Marks, Patricia K Correll, Margaret Williamson

447 Systemic adjuvant therapies for early breast cancer: 15-year results for recurrence and survival
John F Forbes, Jack Cuzick

RESEARCH

450 Cost-effectiveness of rehabilitation after an acute coronary event: a randomised controlled trial
Tom G Briffa, Simon D Eckermann, Alison D Griffiths, Phillip J Harris, M Rose Heath, Saul B Freedman, Lana T Donaldson, N Kathryn Briffa, Anthony C Keech

457 Barriers to delivering asthma care: a qualitative study of general practitioners
Dianne P Goeman, Chris D Hogan, Rosalie A Aroni, Michael J Abramson, Susan M Sawyer, Kay Stewart, Lena A Sanci, Jo A Douglass

MEDICAL EDUCATION

461 Barriers to student access to patients in a group of teaching hospitals
Leslie G Olson, Suzanne R Hill, David A Newby

SYSTEMATIC REVIEW

464 A systematic review and economic analysis of drug-eluting coronary stents available in Australia

PERSONAL PERSPECTIVE

472 Adult domiciliary oxygen therapy: a patient’s perspective
Anne E Cahill Lambert

474 Adult domiciliary oxygen therapy
Christine F McDonald, Alan J Crockett, Iven H Young

TEACHING ON THE RUN

475 Teaching on the run tips 11: the junior doctor in difficulty
Fiona R Lake, Gerard Ryan

LESSONS FROM PRACTICE

477 Tubulointerstitial nephritis and uveitis syndrome: sore eyes and sick kidneys
Andy K H Lim, Matthew A Roberts, Troy Lim Joon, Vicki Levidiotis

DR ROSS INGRAM MEMORIAL ESSAY COMPETITION

479 Telling you our story: how apology and action relate to health and social problems in Aboriginal and Torres Strait Islander communities
Wendy A Hermeston

MJA PRACTICE ESSENTIALS — SPORTS MEDICINE

482 2. The use of diagnostic imaging in sports medicine
John W Orchard, John W Read, Ian (Jock) F Anderson

LETTERS

PLAYERS IN TEAM CARE

On a recent trip to the United States, I was somewhat intrigued by a large mural in McDonald’s entitled The pyramid of success, giving the essential principles of their corporate culture. Promoting the pursuit of excellence, it defines attributes such as “initiative” and “cooperation”. But what particularly caught my eye was “teamwork” — “... an eagerness to sacrifice personal interest and glory for the welfare of all”.

Interestingly, these attributes are echoed in modern medicine, where coordinated and collaborative care by multidisciplinary teams is now being advanced as the benchmark, especially in managing the twin burdens of ageing and chronic disease. Indeed, David Lawrence in From chaos to care argues that organisations can no longer ignore the pressing need “… to support the integration and coordination of care … [to] enable patients to receive the best that medicine can offer.” He goes on to say that the nightmare for patients of navigating complex and fragmented health systems should be a thing of the past. Lawrence further postulates that the days of the autonomous craft-based doctor are numbered.

The concept of teamwork is not new. In 1918, a writer in the BMJ, reflecting on the advent of medical teamwork in the chaos and carnage of the Great War, urged that it be adopted by the British health system to replace the “unorganised, individual expert, however brilliant”.

From the beginning, team players were multidisciplinary experts, but the appointment of the team captain has remained contentious. The Productivity Commission in its recent position paper, Australia’s health workforce, suggests the solution may lie with the institution of multiskilled workers graduating from a common and condensed health course.

A jack of all trades, master of none — but maybe ideally suited to manage team care.
