

## Correction

**Incorrect graph and wording:** In “Avoidable hospitalisation in Aboriginal and non-Aboriginal people in the Northern Territory” in the 18 May 2009 issue of the *Journal* (*Med J Aust* 2009; 190: 532-536), there was an error in Box 4 (page 535). In the panels headed “25–44 years” and “45 years and over”, the lines representing Aboriginal and non-Aboriginal rates were transposed. The correct version of Box 4 appears here.

In addition, in the second paragraph of the results section, the wording was potentially misleading. The paragraph should have read:

“Although total average avoidable hospitalisation rates were higher in Aboriginal than non-Aboriginal people in the NT, the largest differences were observed in the age groups 25–44 and 45–64 years (Box 1).” □

### 4 Trends in age-adjusted, avoidable hospitalisation rates by Aboriginality and age group, Northern Territory, 1998–99 to 2005–06
